

The battery powered crimp tools do not need any physical power for operation. The big advantage: The necessary fine tuning of the contact adjustment between the dies has no overlay from physical pump movements. Especially for non professional “crimpers” this is extremely supporting the repeatable quality of the crimp results.

The stationary crimp equipment, which consists of a electro- pump unit connected to the crimp head via a high pressure hose, is specially designed for professional industrial production of wire harnesses. Both hands can be used for the positioning and adjustment of the contact and cable. The advantage is obvious: Non fatigue and concentrated working is possible, which guarantees high output and work efficiency.

## AKKU-Compression Tools

RAP 60R

RAP 60C

RAP 60H

### AKKU-Compression Tool

Compression head 180° rotation

Quick stop

Type RAP 60C und RAP 60H AKKU up to 150 compressions

Type RAP 60R AKKU up to 170 compressions

Electronical speed control button

Short operating time working time in case of high speed pump
